

Biology Bricks: Activity

Egg Tectonics: create your own plate tectonics.

Create your own plate tectonics using this simple guide.

You will need:

- 1 egg
- Food dye (colour of your choice)
- Vinegar
- Water

Instructions

1. Boil the egg, enough to be able to crack the shell and not have anything “erupt”.
2. Prepare a liquid – 2 teaspoons of vinegar to 1 cup of water. Add several drops of food colouring to it.
3. Crack the shell of the egg slightly so you have your “plate tectonics”.
4. Place the egg in the solution you’ve just made, for as long as you like. The longer the egg stays in there, the brighter the plates will be.
5. Remove the egg and study your utopian egg world with it’s own set of tectonic plates.
