

# Biology Bricks Keywords

---

## What This is About

Please use this document to help further your knowledge, by printing out the keywords associated with the relevant page.

This document is set up for you to cut out the keywords (and laminate them if you think it will help), to be used as a quick guide reference for the subject matter that is included.

## Warning

**Please note:** the keywords included in this document are those that link with the page subject matter. They may relate to other pages as well, but they are meant for the page that the link is provided from. Use them as a resource as you so wish.

## Printing

Please feel free **not** to print this page of the document, it is merely a reference and information page.

## **MRSA (Methicillin-resistant Staphylococcus aureus)**

MRSA is a drug-resistant superbug that infects people, mainly while in hospital. It can be treated and is not fatal.

## **Hospital**

A big building that allows doctors to treat patients; where MRSA is quite common to get infected with.

## **Infection**

An infection is a pathogen that invades the body and creates new cells that make you feel ill. They are usually treated with antibiotics.

## **Swelling**

One of the symptoms of MRSA, you can often get swelling in places that are infected.

## **Warmth**

Having MRSA as an infection, you may find discomfort in areas that are warmer than usual. This is one of the symptoms of MRSA.

## **Pain**

Having MRSA as an infection, you may have a symptom of pain in places. It can cause some discomfort.

## Pus

A gooeey liquid that is the result of toxins that want to escape the body, pus is often an off-white colour, and can be treated with creams.

## Redness

Another symptom of MRSA, redness in areas local to the infection present themselves.

## Prison

Another place you can get infected with MRSA is in prison, along with hospitals. It is a common bug that goes around.

## Nursing Home

Another place you can get infected with MRSA is a nursing home. It is a common bug that goes around.

## Antibacterial Cream

A method of treatment for MRSA is to use an antibacterial cream. While MRSA won't go just from this, prolonged use of it will reduce it significantly.

## Antibacterial Soap

A method of treatment for MRSA is to use antibacterial soap. This can help reduce the symptoms of MRSA.
