

# Biology Bricks Keywords

---

## What This is About

Please use this document to help further your knowledge, by printing out the keywords associated with the relevant page.

This document is set up for you to cut out the keywords (and laminate them if you think it will help), to be used as a quick guide reference for the subject matter that is included.

## Warning

**Please note:** the keywords included in this document are those that link with the page subject matter. They may relate to other pages as well, but they are meant for the page that the link is provided from. Use them as a resource as you so wish.

## Printing

Please feel free **not** to print this page of the document, it is merely a reference and information page.

## Deforestation

The removal of trees in an area where it will impact the ecosystem and local wildlife.

## Cutting Trees

The process of deforestation involves cutting trees. This could be to open up for livestock use, agriculture or housing.

## Habitat

Habitat is the area that is lost during deforestation. It is lost to thousands of different organisms.

## Biodiversity

The biodiversity of an area is high or low, meaning a lot of organisms, or very few organisms.

## Rainforest

A rainforest is a biome that has tall trees that cause humid conditions and where it rains often. There is usually a high biodiversity here too.

## Conservation

There are many conservation programmes around the world that look after the re-forestation of areas that have been chopped down.

## United Nations

United Nations are an organisation that cover the world, and operate to maintain international peace and security.

## Wildlife

Wildlife that is around the world is constantly being adapted and changed due to things happening such as deforestation.
