

Biology Bricks Keywords

What This is About

Please use this document to help further your knowledge, by printing out the keywords associated with the relevant page.

This document is set up for you to cut out the keywords (and laminate them if you think it will help), to be used as a quick guide reference for the subject matter that is included.

Warning

Please note: the keywords included in this document are those that link with the page subject matter. They may relate to other pages as well, but they are meant for the page that the link is provided from. Use them as a resource as you so wish.

Printing

Please feel free **not** to print this page of the document, it is merely a reference and information page.

Global Warming

Global warming is the warming up of the entire planet year-on-year, where it is steadily rising.

Climate Change

Climate change is a change in the climate in areas that are deemed a significant change – a desert having snow for example.

Warming the Earth

Warming the Earth is due to excessive carbon dioxide production. There are other factors as well, but the main one is due to this.

Atmosphere

The atmosphere is split into 5 different sections, depending on the height you are from the ground, and it is where the greenhouse effect happens.

Greenhouse Effect

The greenhouse effect is in the atmosphere, where the sunlight heats up the Earth, and the greenhouse gases bounce back down to Earth from the top of the atmosphere and heat it up more.

Carbon Neutral

Companies that are carbon neutral offset their carbon use against things like planting trees or creating carbon sinks for capture of carbon in areas of high carbon intensity.

Fossil Fuels

Fossil fuels are oil, coal and gas, and they can provide energy for cars, homes and more. They are a finite source of energy.

Smog

Smog is a form of water molecules and carbon dioxide that forms what looks like a cloud of a yellow/brown colour.

Ozone Layer

The ozone layer is a protective layer of the atmosphere, which protects us from UV light radiation from the sun.
