

Biology Bricks Activity

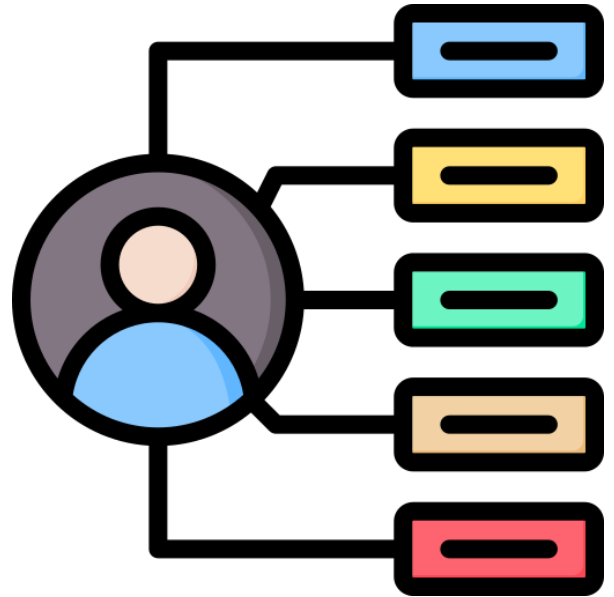

Characteristics

You can choose what characteristics you want a plant to have by using this simple exercise.

Decide what characteristics you want a plant to have, but you must **ONLY** choose three options. These limitations are in place as any more would be unethical for the plant.

You will need:

- Scissors
- Glue

Instructions

1. Cut out the options you have in the table on the next page.
2. Using the options, choose up to three. You can **ONLY** choose three at any given time.
3. Glue in your options you want to choose to the second table on the next page.

Extended

You can use this point to discuss why you can't necessarily have all the options you want, or why you can only choose three options (in this instance) and no more.

Higher yield	Curly leaves	Small fruit
Long stems	Disease resistance	Large fruit
More flowers	Different leaf colour	Many fruit

Your plant will have:

--	--	--
