

Biology Bricks Keywords

What This is About

Please use this document to help further your knowledge, by printing out the keywords associated with the relevant page.

This document is set up for you to cut out the keywords (and laminate them if you think it will help), to be used as a quick guide reference for the subject matter that is included.

Warning

Please note: the keywords included in this document are those that link with the page subject matter. They may relate to other pages as well, but they are meant for the page that the link is provided from. Use them as a resource as you so wish.

Printing

Please feel free **not** to print this page of the document, it is merely a reference and information page.

Eukaryote

A domain of life that includes all multi-celled organisms. They make up most of the organisms we have in the world.

Eukaryota

Multi-celled organisms that are living. This makes up most of what we usually see in the world – animals, birds, humans, plants.

Multi-celled Organism

A multi-celled organism is a living organism that has many parts, all made up of cells.

Nucleus

Nucleus is the brain of a cell that is from eukaryote. They contain the DNA and chromosomes, genetic materials used to reproduce more of the same.

Common Ancestor

Described as where we have all come from, a common ancestor is what links all living organisms in the eukaryota domain.

Chimeric Protobacterium

A type of bacterium that fused together to form what we now class as eukaryote, hence the name chimera, meaning more than one.
